The Chimneypiece.

THE Chimneypiece, in every house and under all conditions, is a feature of the first importance. It is, to all intents and purposes, the dominating structural feature, and more or less controls the decorative scheme; at all events it inspires and regulates it. The chimneypiece was always very much of an English institution. Before the invention of chimneys, the fire was laid on a hearthstone in the centre of the manor house or baronial hall, and the smoke had to find its way through an opening in the roof. The Tudor times, with their coincident evolution of the home, witnessed the gradual introduction of the chimneypiece and the gracious comfort of the ingle-nook or chimney corner. The great four-centred opening of the Elizabethan and Jacobean chimneypieces was a fit frame-work for the glow of the brave wood fire in whose flickering half-lights the family circle foregathered after the winter day had closed. The big fireplaces, with their roaring and spluttering logs and their massive andirons, were typical in a way of those spacious times. Even in the yeoman's hall, bare as it was of all that was ornamental, there was a sense of comfort about the chimney corner. No meridional country, with its population living chiefly out of doors, could ever have had the same practical conception of home life or have bestowed so much thought upon its typical feature, the chimneypiece. Our austere north exposed her sons to many rigours, but out of those rigours grew the domestic hearth, with that love of home and country which characterises the Anglo-Saxon race.

When the conditions of an expanding population demanded more modest schemes of architecture the great chimneypiece gave place to something of humbler extent, but what was lost in size was often gained in elaboration. The early severity disappeared in the vigorous relief of carved oak. Ornament, catching something of the spirit of the Renaissance, cast itself adrift from Gothic formalism, and revelled in a free, if occasionally clumsy, fancy. The history of the chimneypiece from that time onward

is, in effect, a history of the styles. The ornament became florid or restrained according to the prevailing mode. Stuart, William and Mary, Queen Anne, and Georgian are expressions by which we indicate the variations of popular taste in matters of Decoration. The chimneypiece became characteristic of each in turn; having the imported richness of French art in the time of the later Stuarts, the splendid fertility of design as executed by a Grinling Gibbons early in the eighteenth century, the formal quaintness of the Dutch spirit, with its pretty vogue of tiled hearths, after the Revolution, the transitional compromise of style in Queen Anne's reign, the more opulent decoration of the early Georges, the fine lines and delicate mouldings of a Chippendale and the delicate classic graces of an Adam, and in the nineteenth century the heavy, uninteresting, featureless marble jambs and mantels of the Victorian *débâcle* in art.

The taste of the present day is happily reverting, though slowly, to the simpler models of the latter part of the eighteenth century. These, adapted to the exigencies of the modern dwelling house, satisfy completely the requirements both of art and comfort. For in a hyperborean climate such as ours the fireplace must always be the ruling feature in a living room, and the chimneypiece, which cannot therefore be dispensed with, becomes the starting-point of any scheme of decoration. Now, although it must be classed as a structural feature, its decorative possibilities should never be lost sight of. Unfortunately, in the average speculatively-built house, the chimneypieces and grates are generally hybrid in style, vicious in ornament, and ruinous to any scheme in which a harmonious design is aimed at. They are manufacturer's designs, made to tickle the taste of the uninformed, and riotously disregardful of artistic principles. It would, in most cases, repay the occupier of such a house, if, providing he enjoys the relative fixity of tenure which a lease ensures, he were to have all these incongruous chimneypieces removed, and others, more pleasing in appearance and more correct in style, substituted. The cost of such a structural

improvement would be repaid over and over again in the aid it would give to a really artistic *ensemble*. For the chimneypiece, in the important rooms of the house, is the *pièce de résistance* of the decorative scheme. It regulates the style; it dominates the situation. All the art in the world will fail to produce a perfectly satisfactory result if you are fettered with one of the banal designs by means of which an ignoble ingenuity panders to a vulgar commercial demand.

It is a recognition of the great decorative possibilities of the mantelpiece that has led Warings to prepare a number of new designs meeting every requirement as to taste, style and cost. They have given particular attention to those grates and chimneypieces which are suitable to the country house, the London flat, or the suburban villa; pretty, refined, and inexpensive. Naturally the simple and delicate ornament of the Adams style has found a warm welcome at the hands of the public. Warings have, by means of their large studios, produced numbers of examples, and they are generally recognised as the most successful exponents of this style.

The popularity of the wood chimneypiece owes much to their artistic treatment. Except in very few cases, the marble chimneypiece is fatal to harmony of colouring, or even to effective contrast. It is gradually, but surely, being ousted from the place it has so unworthily occupied, and mahogany or white enamelled pine reigns in its stead. Warings have a large and varied selection in stock of specially designed chimneypieces suitable for every need, all constructed of dry, well-seasoned wood, treated with architectural detail, and cheap because they are made with modern labour-saving machinery. For the dining room, hall, or library, for the drawing room or boudoir, for the morning room or bedroom their treatments are original, charming and moderately priced. They strongly advise those who wish to have their homes decorated with taste to start well with the structural foundation of good artistic chimneypieces.

Grates must equally be considered. So much may be done, when tiles are used, either for the hearth or the side slips, or for both, by choosing the exact shade of colour that complements the general scheme. The grate must correspond and have a sort of artistic intimacy with its framework. It is of no use having an Adams chimneypiece if the grate and kerb be of a different style, or, as is more probable, of no style at all. To this harmonising of the several parts Warings give an intelligent care, and the result is that their grates and chimneypieces, even in the cheapest varieties, are artistic counterparts the one of the other. A few pounds laid out in this department of decoration, and under the tasteful guidance of this firm, will provide a fitting foundation for charming effects. It is not contended, of course, that a good chimneypiece will ensure a good decorative scheme ; but it may be confidently asserted that without a good chimneypiece a good scheme is impossible.

The chimneypieces in this book are all photographed from actual examples which have been specially designed and manufactured by Warings. They form only a small part of the very large and comprehensive selection at their various show-rooms, but it is believed that they will be found to contain fully representative treatments suited to the various rooms of an ordinary house, either in town or country. Every information that a catalogue can give is contained in the accompanying letterpress, but as it is difficult to convey, even with the aid of photography, the exact effect of coloured woods, it is very desirable that intending purchasers should visit Messrs. Warings' Galleries and see for themselves the actual chimneypieces.

Waring's facilities for manufacturing on a large scale enable them to produce at a cost which permits of a relatively low selling price. The chimneypieces and their appointments are in all cases architecturally correct and in harmony with the style for which they are intended ; and the different materials used in their manufacture are of the finest obtainable quality.

desire to point out that the Chimney-piece treatment must be regarded as the inevitable foundation of the decorative scheme. It is a structural feature which practically controls all the other features. Its importance, from this point of view, cannot be disputed, and it is therefore of the first urgency that the Chimneypiece should be artistic and correct in style.

prices are moderate. There is an erroneous idea in some quarters that they *only* make the costliest kind of furniture ; that their energies and resources are concentrated upon magnificent carved and inlaid work, suitable only for the wealthy. This is entirely a mistake. They make cheap articles as well as expensive ones. Having their own extensive factories they can manufacture cheaply, with constant regard to quality and durability.

WARINGS

make a special feature of wood panelling for halls, dining-rooms, libraries, &c. Machine-made panelling is in all respects equal to that made by hand; the mouldings are true, the surface is perfectly smooth; but there is an advantage in the cost. By the help of their splendid machinery, Warings can produce first-class panelling at very inviting prices.

are noted for their parquet flooring, which is not only of attractive design, but is laid with a precision which assures practical permanency of wear. The popularity of this floor treatment in certain rooms, especially where it is desired to display fine Oriental rugs, is greatly on the increase. Warings' selection of special parquets is thoroughly comprehensive, and the prices are surprisingly low.

WARINGS are distinguished in their decorative designs by the simplicity, which is the high-water mark of Art. Simplicity is the key-note of refinement, and refinement is the expression of perfect taste. These are qualities which may be evidenced in every apartment, no matter how large or small its cost, and which Warings exhibit in the most pleasing variety.

WARNINGS

Chimneypieces are not only artistic. They are made of selected well-seasoned wood, and being designed to utilise the modern machinery at their factories to the best advantage, they compare most favourably in price with even inferior productions. They have the distinction of being pure in style, refined in ornament, and perfect in finish.

WARNINGS

have given particular attention to the question of Electrical Installations and fittings, and have organised for the purpose of effective work a department of practical and competent electricians. Their showrooms contain a splendid assortment of artistic and well made fittings of new and exclusive design, and suited to every kind of requirement.

MIRRORS

Suitable for WARINGS' Chimneypieces.

A Chimneypiece in the refined eighteenth century style is greatly enhanced in its effect by being surmounted with an appropriate gilt mirror. In the following pages will be found an interesting selection of reproductions from the best antique examples. Only the best gold leaf and the finest quality of glass are employed in the construction of these graceful revivals of a charming old English style.
